

SPECIFICATION

Range: **FLAP**

Design: **Alberto Meda, Francesco Meda**

“Snowsound Technology” sound absorbing element composed of 6 Botanica panels and a free-standing structure.

Panel description:

Both faces with convex section 36 mm thick, consisting of an internal padding in variable density polyester fiber. The density decreases moving towards the heart of the panel, which is covered on both sides with Trevira CS® polyester fabric, solidly applied to the padding. The panel is double sided, with same characteristics on both sides. It is characterized by the rigid edge obtained by the manufacturing process itself, without any supporting and/or stiffening frame.

The panel has an **Italian Class1** fire reaction and **Euroclass B-s2, d0**.

The panel is **Greenguard Gold** certified, which validates its low VOC emission and its contribution to the quality of the indoor environment.

The panel is **100% recyclable** and has no detectable formaldehyde content according to UNI EN 717-2. It does not contain felts or other organic materials that are hardly recyclable.

The panel has been tested in reverberation chamber according to UNI EN ISO 354 and obtained “**Acoustic Absorption Class A**”, in accordance with UNI EN ISO 11654.

Structure description:

The panels are fixed using arms, welded to a chromed tubular steel structure, equipped with plates and casings in chromed steel, fixed directly to the panels using self-tapping screws. These two elements are connected by a joint that allows the rotation and inclination of each panel. The base is made of steel, thickness 5 mm, epoxy powder-coated.
